

CroxX Nitrification Inhibitor

Protection

“Ready-to-use” DMPP-solution for stabilization of Slurry and Digestates
Additive containing 3,4 DMPP

Standard Concentrations:

5% DMPP

10% DMPP

CroxX Nitrification Inhibitor delays the conversion of ammonium to nitrate significantly.

CroxX Nitrification Inhibitor inhibits Nitrosomonas activity and therefore Nitrogen will remain available as ammonium (NH_4^+) to plants for up to 14 weeks. Leaching losses of NO_3^- and gaseous losses of N_2O are largely reduced whereby in consequence Nitrogen Use Efficiency is increased.

Benefits

- ✓ Longer NH_4 in the soil
- ✓ More N for the plant
- ✓ Less N losses through leaching (NO_3^-) and volatilization (N_2O)

Packing: 20l / 200 l / 1000l
