

CroxX Urease Inhibitor

Urease Inhibitor NBPT

“Ready-to-use” solution for stabilization of Urea and UAN

CroxX Urease Inhibitor blocks the activity of the Urease enzyme and inhibits the conversion of Urea, reducing ammonia losses and providing more Nitrogen to the plant.

Ammonia losses after surface application of Urea are inevitable if no Urease Inhibitor is used. Adding CroxX Urease Inhibitor significantly reduces the enzymatic conversion of Urea to ammonia for 2-3 weeks and leads to higher Nitrogen efficiency.

Standard Concentrations:

25% NBPT

Various colors for branding available

Simple application in fertilizer mixing systems (batch blender, continuous mixer or screw conveyer) to Urea and to liquid fertilizers (i.e. UAN).

Benefits

- ✓ Protected Nitrogen against volatilization losses
- ✓ More N for the plant
- ✓ Safe handling

Packing: 20l / 200 l / 1000l
